$\qquad$ Accounts receivable days
2 $\qquad$ Inventory days 3 $\qquad$ Accounts payable days
4 $\qquad$ Cash need in days

5 \$ $\qquad$ Average day's sales Divide projected sales by 365 days to get average day's sales. Ex. $\$ 1,100,000 \div 365$ $=\$ 3,013$ per day in sales

* When calculating the financing need in the working capital cycle, you can use either Projected Sales or Cost of Goods Sold (COGS). The COGS amount will give you the average amount of inventory you sell on a daily basis. It is assumed this will be a lower number than sales, and therefore be a more conservative amount. It does not consider all expenses, only those variable to sales.

## $=\$$ Speed of Cash ${ }^{\text {TM }}$

The Speed of Cash Dashboard was a dashboard that was automatically generated when a new account was created. It is no longer generated by default, but you can easily create the dashboard to see how fast your cash is coming in and out of our business. Simply create a new dashboard, name it the "Speed of Cash" and add the cards shown below.
